The filter surfaces in the chambers are during cleansing impinged in counter stream by cleansing air drawn in from the atmosphere or the purified air stream by means of a fan, separate from the dust-laden air fan. A cyclone is connected forwardly or rearwardly with the cleansing air fan. The fan has such capacity that the volume of the cleansing air flowing per time unit through the chamber connected for cleansing is greater than or a multiple of the volume of the dust-laden air previously flowing through the chamber.
